

NAIP Status
Report to the Idaho Geospatial Committee
6/10/2004

The contract for Idaho under Sol. USDA-NAIP-3-04, has been awarded to North West Geomatics for \$1,271,790.00. The work has been subcontracted to Horizons, out of Rapid City, SD.

Nathan Bentley, Idaho State GIS Coordinator, developed partnerships with approximately 45 partners contributing \$530,000 to enable the entire state to be collected at 1 meter resolution.

The entire state will be done and flown with the Leica ADS-40 push boom sensor flown from an elevation of 23,000 feet to produce 1 meter DOQs. They will start flying Shoshone county and forested areas possibly this week. The remainder of the state will begin around June 20th with initial delivery of 2 meter data, needed for FSA compliance scheduled for 60 days after flight. DOQQ and MrSID DOQ are to be delivered within a year of flight.

The contract award was delayed by protests. The protests were dismissed. There are a few states that have not been awarded to a contractor yet. The last contracts may be awarded this week.

The FSA-APFO is not facilitating modifications to the current contract. Any requirement or interest in getting an additional ADS-40 derived CIR product would have to be negotiated between the interested party and NW Geomatics. The Coeur d'Alene Tribe is coordinating agencies that will want this information. It is estimated that 1-meter CIR USGS 7.5 minute quads can be purchased for \$90.00 to \$100.00 per quad. The Tribe needs to know who is interested in getting this information as soon as possible since the plane was supposed to have been in the air this week but was put on hold. Please call Laura Moyer at the Coeur d'Alene Tribe - GIS program at (208) 686-0750 or e-mail your information to <lmoyer@cdatribe-nsn.gov> as soon as possible. The plane will be taking infrared data only on those quads specified by agencies.
